

ATHEROSCLEROTIC CORONARY ARTERY DISEASE AND ANGINA -

ATHEROSCLEROTIC HEART DISEASE WITH ANGINA PECTORIS

- ICD-10-CM has combination codes for atherosclerotic heart disease with angina pectoris.
- The subcategories for these codes are I25.11, Atherosclerotic heart disease of native coronary artery with angina pectoris and I25.7, Atherosclerosis of coronary artery bypass graft(s) and coronary artery of transplanted heart with angina pectoris.
- When using one of these combination codes it is not necessary to use an additional code for angina pectoris.
- A causal relationship can be assumed in a patient with both atherosclerosis and angina pectoris, unless the documentation indicates the angina is due to something other than the atherosclerosis.
- If a patient with coronary artery disease is admitted due to an acute myocardial infarction (AMI), the AMI should be sequenced before the coronary artery disease.
