New electronic claim submission rules begin January 1, 2012

If you currently submit electronic claims using an ANSI X12 4010 A1 837-P or 837-I format to MVP Health Care, you must switch to an ANSI X12 5010 837-P or 837-I format by January 1, 2012. MVP is already prepared to accept 5010 837-P and 837-I electronic claim submissions.

- If you submit electronic claims directly to MVP, you may contact MVP's EDI Services Department at **1-877-461-4911** to schedule a test of an ANSI X12 5010 837-P or 837-I file. Once a successful test has been completed, EDI Services will schedule your production implementation of 5010 837-P or 837-I claim submissions, which may be prior to Jan. 1, 2012.
- If you currently submit claims to a clearing house, which in turn sends an electronic claim file to MVP, please work with your clearing house to ensure the data you submit will allow the clearing house to send MVP a compliant 5010 837 file.

If you submit a 4010 837-P or 837-I electronic claim file to MVP on or after January 1, 2012, your claim file will be rejected as non-compliant.

Electronic claims experience is an average of 12-15 days faster than paper submissions due to the manual intervention required for paper claims. Please also be aware that rejections for electronically-submitted claims are within 24 hours versus 5 days to receive notice for paper submissions and additional time to resubmit then.

2011 provider seminars

Two representatives from your office are invited to attend the annual MVP Provider Seminar. Join us for the latest information on MVP products, systems and policies. All seminars will be held from 12:00-1:30 pm and lunch will be served. Below is a listing of the scheduled seminars in Vermont.

actices

| Day | Date | Place | City |
|-----------|----------|----------------------------|---------------|
| Friday | Sept. 30 | Central Vermont | Berlin |
| | | Medical Center | |
| Wednesday | Oct. 5 | Northwestern Medical Ctr. | St. Albans |
| Tuesday | Oct. 11 | Northeastern Vermont | St. Johnsbury |
| | | Regional Hospital | |
| Wednesday | Oct. 19 | Porter Hospital | Middlebury |
| Tuesday | Oct. 25 | Doubletree Hotel | Burlington |
| Thursday | Oct. 27 | Brattleboro Memorial Hosp. | Brattleboro |
| Tuesday | Nov. 1 | Southwestern Vermont | Bennington |
| | | Medical Center | |
| Monday | Nov. 7 | Rutland Regional | Rutland |
| | | Medical Center | |

Register for one of the above sessions online at **www.mvphealthcare.com/provider.** Be sure to sign up early, as space is limited. If you have any questions, please contact Gina Polchlopek at **1-802-264-6521**.

Upcoming updates to MVP ID cards

MVP Health Care recently selected a new vendor partner to facilitate the printing and distribution of ID cards. We are taking this opportunity to update the design and content of all the ID cards we produce to make it easier for health care providers and members to find the information on the cards that pertains to them.

- Updates include a more standardized set of informational components on the ID cards. By making the content more consistent, we can streamline the ID card production process, better ensure card accuracy and reduce language variations that may cause confusion for provider offices.
- Commercial members with a copay/coinsurance cost share will now see "Urgent Care" called out on the front of the card to highlight the cost savings of using urgent care instead of the emergency room when appropriate.
- ID cards for Medicare members have a cleaner look that is easier to read. We paid special attention to making the

member ID number as large as possible. Plus, Medicare members with Part D prescription drug coverage will now need only one card for all of their services!

• Information on the back is grouped by audience so that health care providers, pharmacists and members can easily find the information they need on the card.

The updated ID cards will be distributed to Commercial and Medicaid members gradually beginning this fall, as members require or request new cards due to plan changes and regulatory requirements. Medicare members will receive new cards in November and December.

Please be aware that as MVP phases out the current card design, you will see patients with both the "old" and "new" card design. Both are valid for Commercial members. Medicare members' cards will activate automatically on Jan. 1, 2012 for all members. Just remember to log in at **www.mvphealthcare.com/ provider** to check each patient's eligibility and ask to see the most current copy of the member's card at every visit.

Samples of the new cards are above.

Professional Relations Updates

Coming September 21: MVP launches new call menu, voice options

MVP is moving toward enabling fast, simple self-service capabilities for the health care providers and members who call MVP. We will upgrade our phone system in two phases.

The first phase, which will launch on the evening of Wednesday, September 21, will enable callers to speak their choices to navigate our phone menu or connect with a live representative. This Interactive Voice Response (IVR) system is a "smarter" system both for our callers and for our staff, who will gain call handling features that will allow us to better serve your needs.

Which phone numbers will be upgraded

Your practice should be aware that the following phone numbers are part of the IVR phone system upgrade:

| Customer Care Center | |
|-------------------------|----------------|
| for Provider Services: | 1-800-684-9286 |
| Utilization Management: | 1-800-568-0458 |

MVP also is upgrading many of its Customer Care Center phone lines called by our members.

New menu options

As part of the IVR phone system upgrade, MVP is adopting a more streamlined phone option menu, allowing the IVR system to recognize spoken preferences and route calls where they need to go.

To help you prepare for the addition of the speech-enabled IVR, the main menu options will include eligibility, benefits, authorizations, claims, and other, with appropriate sub-menus in place to serve your more specific needs. While the new menu is easy to navigate even if you don't know the options before you call, you can speak your preferences if you know them and speed through the call routing process. Touch tone options will continue to be available.

Self-service features coming in 2012

Enhancing the IVR system enables the second phase of MVP's phone system upgrade, which will launch in 2012 and include greater self-service functionality that will give members and health care providers the opportunity to obtain information on more routine inquiries, without waiting to speak with a live representative. We will share more information about these features as it becomes available!

More members exceeding physical therapy benefit

Most members of health plans provided or administered by MVP Health Care have a limited outpatient therapy benefit; typically 30 visits for any combination of outpatient physical, speech and occupational therapy are covered during a plan year (note that a plan year is different from a calendar year, as employers can sign up for or renew coverage throughout the year; MVP does not require a January 1 effective date).

MVP is seeing an increase in the number of members who are exceeding that visit limit, particularly in Vermont. In many cases, these are patients undergoing outpatient physical therapy whose diagnosis indicates that the therapy could be appropriately concluded within approximately 6-8 visits. This allows time for the patient to show measurable improvement and for physical therapy providers to design an exercise program that patients may continue at home. Appropriate conservation of the combined therapy benefit helps ensure that the patient has remaining benefits during the plan year if it is needed, while also containing costs for therapy that is not medically necessary.

MVP is currently reaching out to a number of physical therapy providers to share our concerns. We also are communicating to members via our fall 2011 newsletter the importance of using their combined therapy benefit wisely. Please assist our efforts whenever applicable by encouraging your patients to use outpatient physical therapy as it is intended – as a jumpstart to increased or recovered function.

Potential HIPAA issues when submitting EOB/EOP to support payment of claims

There are times when MVP requires providers to submit claims with an *Explanation of Benefits (EOB)* or *Explanation of Payment* (*EOP*) to process a claim. MVP recently noticed that providers are submitting EOB/EOPs for MVP members with other members' protected health information still visible. This may be considered a HIPAA violation, so we are asking for your cooperation in maintaining the protected health information of your patients and our members.

Please be advised when you submit a claim to MVP with an EOB/EOP as an attachment that you need to suppress or black out all other information that does not pertain to the member about which you are inquiring. This will ensure that providers and MVP are keeping our members' protected health information secure and safe. Thank you for your assistance.

Reminder: Vermont vaccine pilot program

As announced in the March/April 2011 edition of *Healthy Practices*, MVP Health Care has joined with other private health insurers, Medicaid and the Vermont Department of Health (VDH) in the new Vaccines for Adults (VFA) program effective April 1, 2011. This has changed the manner of purchase, distribution and payment for vaccines for your adult patients. The methods, used successfully in Vermont for more than 30 years to provide vaccines for children, will now apply to the entire population served. MVP will continue to reimburse you for the administration of vaccines. Payment of this fee, however, is contingent upon MVP receiving notification from you as to the specific vaccine that was administered. You will do this by submitting a claim for either \$0.00 or \$0.01 (check with your clearing house for limitations), using the CPT code for the vaccine and including the state supplied modifier code "SL" (state-supplied vaccine; Health Care Procedure Coding Systems [HCPCS] National Level II Medicare Code Modifier).

MVP is currently running monthly reports to verify that claims are being filed following the state-recommended method. We will begin contacting any provider office that has enrolled in the program but has not been filing claims as outlined above. If you have any questions about this process, please contact your Professional Relations Representative.

The VFA program provides a significant opportunity to improve immunization rates in Vermont while reducing costs for your practice and for MVP. More importantly, it gives us all the opportunity to reduce illness caused by vaccine-preventable diseases.

If you are not already enrolled in the VFA program, you may download a form at: http://healthvermont.gov/hc/imm/ documents/providerenrollment.pdf or contact your district health office or the Vermont Department of Health Immunization Program at 1-800-640-4374 for more information.

Fee integration updates

For claims with a date of service on or after January 1, 2012, MVP will be changing the way particular modifiers/codes are reimbursed. This is a result of a continued effort to integrate pricing practices across the MVP enterprise.

Please review the following information for more detail: Anesthesia Modifier Codes QK, QX and QY

Modifier codes QK, QX or QY will be reimbursed at 50% of the reimbursable amount. This applies to professional claims only for all lines of business.

The following is supporting documentation from the CMS Anesthesia Billing Guide:

Payment Rules

The fee schedule allowance for anesthesia services is based on a calculation that includes the anesthesia base units assigned to each anesthesia code, the anesthesia time involved, and appropriate area conversion factor. The following formulas are used to determine payment:

CRNA Medically Directed (Modifier QX)

(Base Units + Time Units) x Participating Conversion Factor = Allowance x 50%

Participating Physician Medically Directing (Modifier QY, QK)

(Base Units + Time Units) x Participating Conversion Factor = Allowance x 50%

• Non-Participating Physician Medically Directing (Modifier QY, QK)

(Base Units + Time Units) x Non-Participating Conversion Factor = Allowance x 50%

Unpriced codes less than \$50

These codes were previously reimbursed at 80% of charges and will now be reimbursed at 100% of charges.

GAP code pricing – MVP will no longer use Ingenix for gap pricing. Reimbursement will be based on a percentage of reasonable charges.

Modifiers

Modifier 52 (Reduced Services) – Will be reimbursed at the lesser of 50% of charges or contracted rate

Modifier 54 (Surgical Care Only) – Will be reimbursed at the lesser of 80% of charges or contracted rate

Modifier 55 (Post Operative Management Only) – Will be reimbursed at the lesser of 10% of charges or contracted rate

Modifier 56 (Pre Operative Management Only) – Will be reimbursed at the lesser of 10% of charges or contracted rate

Modifier 78 (Unplanned return to OR, post-op) – Will be reimbursed at the lesser of 80% of charges or contracted rate.

Collaborative office rounds

Not only do pediatricians and family practitioners provide a significant portion of triage and direct service for mental health needs in their daily practice, but in recent years, due to the lack of child psychiatry time, they have taken on the uneasy task of prescribing psychotropic medications. In Windham County, Vermont's medical and mental health clinicians have worked together to develop Collaborative Office Rounds (COR) to address this issue.

It started as part of the state's required Act 53 Community Needs Assessment. PrimariLink and its host institution, the Brattleboro Retreat, along with the assistance of Dr. Paula Duncan, Director of the Vermont Health Improvement project (VCHIP), hosted a meeting of area medical practitioners, psychiatrists and mental health/addictions providers. (PrimariLink provides the mental health/substance abuse utilization management services for Vermont MVP members). The message received was that physicians treating children and adolescents were feeling the pressure of increased expectations to prescribe psychotropic medications and to treat an ever increasing demand for mental health needs. They identified an uneasiness with prescribing certain medications, a lack of knowledge of triaging for certain mental health needs, uneasiness with providing in-office interventions, a difficulty referring to local resources, and a lack of communication between them and mental health clinicians.

PrimariLink and the Retreat agreed to provide child psychiatry and clinical time to educate and consult if the area pediatric and family practices agreed to meet regularly to discuss their work. Between meetings, PrimariLink would offer an 800 number to call if they needed help with a referral or had a question about medication. To make their lives easier, we also agreed to do this regardless of pay source and we agreed to meet at the area's medical facility, Brattleboro Memorial Hospital.

Over six years, the meetings have evolved to include child psychiatry from the area's mental health center, we've added master's level clinicians, and have developed a list of expert presenters from around the state who either present in person or via teleconference. The meetings are structure around a specific topic such as:

- ADHD
- Childhood depression
- Use of atypical anti psychotic medications in primary care
- Physiological symptoms of anxiety w/children and adolescents
- Making practices friendlier to LGBT youth, and more.

The monthly 90-minute meetings are broken down into a formal presentation with clinical theory and practical application. Participating pediatricians and family practitioners present specific case material on the topic and when applicable; roleplaying is used and clinical problem solving takes place. This also includes identifying area clinicians who specialize in a particular issue. We have even gone so far as to re-shape the release of information to be used between clinicians and physicians and identified what information should be shared. This past year's meetings were based on a 'needs assessment' completed by participating physicians which paralleled a recent paper by the American Pediatric Association entitled, 'The Future of Pediatrics: Mental Health Competencies for Pediatric Primary Care,' which addresses what pediatric practices need to do to provide best care. We developed a list of topics, recruited presenters and offered CMEs.

At the end of the year we did a follow-up assessment in which physicians rated themselves in terms of their skills dealing with psychotropic medications, willingness to do in-office interventions, knowledge of clinical diagnostic categories and ability to refer to area clinicians. The results indicate that COR is seen as a useful resource because of the face-to-face nature of the interactions and the practical hands-on knowledge that is shared. We think this model is worth duplicating in other areas of the state. It brings community practitioners together with experts; it's a practical way to network and is a step towards better integration of care. If you're interested in learning more, please call Peter Albert, LICSW, at PrimariLink at **1-800-320-5895, x6111**.

Medical Policy Updates

The MVP Quality Improvement Committee (QIC) approved the policies summarized below during the April, June, and July meetings. Some of the medical policies may reflect new technology while others clarify existing benefits. All policy updates are listed online in the *Benefits Interpretation Manual* (BIM). Visit MVP online at **www.mvphealthcare.com**. Providers can directly access the online BIM through the Reference section of the Provider portal. The *Current Updates* page of the BIM lists all medical policy updates. If you have questions regarding the medical policies or wish to obtain a paper copy of a policy, contact your Professional Relations representative.

Healthy Practices and/or FastFax will continue to inform your office about new and updated medical policies. MVP encourages your office to look at all of the revisions and updates on a regular basis in the *Benefit Interpretation Manual* (BIM) located on **www.mvphealthcare.com** in the *Reference* section.

Imaging policy updates effective August 1, 2011

MVP utilizes InterQual[®] criteria for many imaging procedures. (see *UM Updates InterQual[®] Reminder* in this newsletter). The updated 2011 InterQual[®]criteria were previously made available to providers via the MVP provider Web site. The following imaging policies may reflect InterQual[®] criteria updates, if applicable, effective August 1, 2011.

MRA Brain

Pre-operative study, carotid endareterectomy planned has been deleted as an indication.

MRA Carotid

There are no changes to this policy.

MRA Kidney

There are no changes to this policy.

MRA Lower Extremity

Peripheral aneurysm by PE/duplex US and angiography not planned has been added as an indication.

MRI Abdomen

There are no changes to this policy.

MRI Chest

For cardiac indications, suspected intracardiac mass "by transthoracic echocardiogram" was added.

MRI Extremity

There are no changes to this policy.

MRI Hip/Knee

There are no changes to this policy.

MRI Neck

There are no changes to this policy.

MRI Pituitary

There are no changes to this policy.

MRI Shoulder/Wrist

There are no changes to this policy.

PET Scan Chest/Cardiac

The policy follows InterQual criteria and contains a Medicare Variation. There are no changes to the policy.

PET Scan Whole Body

This policy was updated to reflect the most recent InterQual indications for PET Whole Body. Multiple myeloma, testicular cancer and baseline part of staging, soft tissue sarcoma and baseline part of staging, and ovarian cancer have been added as indications. The Medicare Variation section was updated to include bone metastasis for cancer. NaF-18 PET imaging is covered Bone Metastasis for Cancer when the member is enrolled in a clinical registry.

Medical policy updates effective October 1, 2011

Continuous Passive Motion Device

Coverage for continuous passive motion device is limited to procedures for the treatment of the knee. Continuous passive motion devices are not covered for the shoulder or elbow.

CT Coronary Arterial Disease

There are no changes to this policy.

Endovascular Procedures

The policy has been updated to reflect that endovascular repair for abdominal aortic aneurysm is covered for patients with a documented unruptured abdominal aortic aneurysm who meet the medical policy criteria. The requirement for patients who are not candidates for open surgical repair has been removed.

Evaluation of New Technology

The policy addresses the process for evaluating new technology or services. There are no changes to this policy.

High Frequency Chest Wall Oscillation Devices

There are no changes to this policy.

Home Care Services

There are no changes to this policy.

Low Vision Aids

The policy has been updated to reflect that due to the lack of data in peer reviewed literature, low vision aids are considered not medically necessary. An Option, Option Family, Option Child Variation has been added that low vision aid services will be considered when criteria are met.

Metal-on-Metal Hip Resurfacing

There are no changes to this policy.

Obstructive Sleep Apnea - Diagnosis (Vermont and New Hampshire) NEW POLICY

- The policy addresses obstructive sleep apnea diagnosis criteria for the states of Vermont and New Hampshire.
- Home sleep studies are covered for members without prior authorization.
- Home sleep studies are required to be provided by an MVP contracted vendor (Sleep Management Solutions).
- Facility-based polysomnography is indicated if the member has a co-morbid or complicating factor listed in the policy.
 Facility-based polysomnography requires prior authorization.
- Medicare products do not require prior authorization for either home sleep studies or facility-based polysomnography.

Obstructive Sleep Apnea - Diagnosis ARCHIVED POLICY

This policy is archived as there are now two new Obstructive Sleep Apnea-Diagnosis policies. Please refer to Obstructive Sleep Apnea – Diagnosis (NY) and Obstructive Sleep Apnea – Diagnosis (Vermont and New Hampshire).

Obstructive Sleep Apnea - Devices

Auto-titrating positive airway pressure (APAP) language was added to the policy. A Medicare Variation for oral appliances was added to the policy. Oral appliances for obstructive sleep apnea are covered when policy criteria are met.

Please refer to the coding section on the policies to identify any code changes (e.g., new, deleted) or codes no longer requiring prior authorization for a specific policy. Each policy grid defines the prior authorization requirements for a specific product.

Radiopharmaceutical policy

Beginning January 1, 2012, MVP will be changing our Radiopharmaceutical Policy as follows:

Any Radiopharmaceutical Codes that are billed **less than \$50** will be reimbursed at 100% of charges per standard MVP policy.

The following Radiopharm codes will be paid at 100% of charges up to \$100 dollars:

- A9541
- A9560

The following Radiopharm codes will be paid at 100% of charges up to \$160 dollars:

- A9500
- A9502
- A9505
- A9538
- A9552

The following Radiopharm codes will be paid at 100% of charges up to \$250 dollars:

- A9562
- A9556

Any other Radiopharm codes or any Radiopharm codes that do not meet the criteria above will require an invoice.

This policy applies to physician claims only, for all lines of business except Medicare.

Physician notice: health care price and quality transparency rule

Pursuant to Act 191 and the resulting Health Care Price and Quality Transparency Rule, physicians can review the physician quality information currently displayed on MVP's Web site. MVP provides physician quality information based on NCQA's physician recognition programs, in addition to primary care and OB/GYN specialty care quality ratings.

If you have received recognition in one or more of the NCQA programs, the appropriate NCQA seal(s) is displayed next to your listing. You may access the information by visiting the member section of the MVP Web site, **www.mvphealthcare.com**, and using the *Provider Search* feature.

If a recognition seal is missing from your name or a seal is displayed incorrectly, or if you have questions about the primary care quality ratings, call MVP's Quality Improvement Department at **1-800-777-4793**, ext. 2023. Act 191 also requires MVP to provide price information to members for certain provider and hospital services. BISHCA identified the specific CPT codes, DRGs, and ICD-9 procedure codes that MVP must price. You can view a list of the CPT codes on the *Provider Home Page* of MVP's Web site. Select the *References* tab and then click the *Vermont Health Care Price and Quality* link. To review the list of hospital services and procedures, visit the *Member Home* page on MVP's Web site. Under *Learn More*, click the *Hospital Safety* link. At the bottom of the page, find *The Hospital Report Cards* link. Then click the link under *Pricing and Financial Reports* to view the information shown in tables 1A, 2A, and 3A - 3I.

The actual price information and specialty care quality ratings are secure and can be viewed only by members using a unique login and password. If you would like to review the price information on display about your practice, contact the Professional Relations Department at **1-800-380-3530, opt. 4**. If you would like to review the OB/GYN specialty care quality rating information, contact MVP's Quality Improvement Department at **1-800-777-4793, ext. 2247**.

Web Updates

Provider portal enhancement: benefits display

Benefits Display offers users of MVP's Web portals quick and comprehensive access to benefit information, improving users' ability to self-serve.

In January, 2011, *Benefits Display* became available to Web portal users — members, employers, brokers and health care providers — to allow access to benefit information for members of select Facets-based products (the Federal Government plan, the New York State Health Insurance Plan [NYSHIP], the Finger Lakes Consortium and Medicare).

By the end of 2011, nearly all members' Facets-based health plans will be linked to a *Benefits Display*, offering an enhanced view of your patients' coverage and payment responsibilities.

To access the *Benefits Display* for a patient, log in at **www.mvphealthcare.com/provider**, perform a patient inquiry and select a patient, then go to *Patient Information*. If the patient search is for a member whose health plan is configured for *Benefits Display*, the patient's health plan name in the *Subscriber and Policy Details* section will be underlined and blue – a hotlink that will bring up the *Benefits Display*.

We think that your practice will find the *Benefits Display* a valuable addition to MVP's Web portal for providers; we are pleased to make this feature more widely available by year-end!

Disabling default provider portal accounts

In the last issue of *Healthy Practices*, we announced that, to ensure the highest level of security for our Web portal users, as of July 5, 2011 we would no longer allow provider portal login usernames to be the same as provider IDs and would disable any accounts with matching usernames/provider IDs.

Based on your feedback, we have extended the timeframe during which portal users may complete the necessary steps to ensure that every user in your practice has a unique login. Accounts with matching usernames/provider IDs will not be disabled until October 1, 2011.

If your MVP provider Web portal username contains part or all of your last name, no action is required. If, however, your MVP provider Web portal username is the same as your practice's MVP payee ID, please follow these action steps to retain your access to the provider portal after October 1:

- 1. Designate a site administrator through MVP's online portal registration process (www.mvphealthcare.com/provider/ register.html)
- 2. Request usernames and passwords for staff, also through the online registration process.

Please note that staff usernames and passwords cannot be set up without the site administrator request form or without an existing site administrator.

If you have any questions, please contact MVP eSupport (esupport@mvphealthcare.com or 1-888-656-5695).

Not yet registered for an online account?

By registering for an account at **mvphealthcare.com** allows you a fast, easy way to get information you need about your MVP patients, our policies and procedures, newsletters and much more. If your practice has Internet access, visit **www.mvphealthcare.com/provider/register.html** to set up accounts for your staff. New features are constantly in development to make your online account a valuable tool for your practice!

Update your provider account profile

If your online account profile includes an outdated or personal e-mail address, take a moment to update it with your current business e-mail address. As MVP continues to explore ways of getting you the information you need via the technology you prefer, your valid e-mail address and profile information will enable you to quickly and easily be part of our advancements! You can update your e-mail address, password and security question at any time by clicking the *Change Profile* link (under your name) just after logging in at **www.mvphealthcare.com/provider.**

Pharmacy Updates

Pharmacy policy and formulary updates

Enteral Therapy

Effective October 1, 2011 for non-Medicare members, enteral nutrition must be obtained at an MVP participating pharmacy and adjudicate through the MVP pharmacy benefits manager (PBM). Copays and/or coinsurances are subject to the member's enteral product benefit. Home infusion vendors that also participate with MVP as a pharmacy provider must bill using a valid NDC/UPC product number. Enteral products indicated for inherited diseases of metabolism (ie: PKU, MSUD) will adjudicate without prior authorization. All other products require prior authorization to determine medical necessity as established in MVP policy.

Tamiflu Dosing Change

When flu season arrives this fall, a liquid form of Tamiflu will be available in a new, lower concentration to reduce the possibility of medication errors. The change applies to the oral suspension form of Tamiflu and not the capsule. The Tamiflu packaging of its oral suspension product says "new strength" because the concentration of medicine in the liquid has been changed from 12 mg/mL to 6 mg/mL. This change in concentration means that the amount of medicine that must be taken has also changed.

Effective September 1, 2011

Advanced Agents for Pulmonary Arterial Hypertension

Indications for Adcirca and Flolan were updated

• Exclusion section updated to indicate Letairis is contraindicated in pregnancy

Contraceptive Agents and Family Planning

• Lo Seasonique was added to the policy

Cystic Fibrosis

- Cayston was added to the policy
- · Criteria for extension of therapy was added

Gaucher's Disease

• Vpriv was added to the policy

Infertility

- Fertinex was removed from the policy as it is no longer on the market
- Follistim AQ is preferred over Gonal-F
- Specific lab documentation criteria was added

Intranasal Corticosteroids

• Nasarel was removed from the policy as it is no longer on the market

Multiple Sclerosis, Select Oral Agents

- Name changed from Ampyra
- Gilenya and Ampyra criteria are similar

Orphan Drugs

• Soliris and Lumizyme were added to the policy

Effective October 1, 2011

ACE/ARB

- Prior authorization will be required for Azor, Tribenzor and Twynsta
- Option and Option Family variation was added. Losartan/HCTZ and Diovan/HCT are the preferred ARBs for these products

Acthar

• New indication for infantile spasms was added

Androgens/Anabolic Steroids

• This is a new policy for MVP Option and MVP Option Family members only. Prior authorization is required and is limited to FDA approved indications only

Antineoplastic Enzyme Inhibitors

 MVP Option and MVP Option Family variation was added that require prior authorization for Gleevec. Established criteria in the policy applies

Direct Renin Inhibitors

• Tekamlo and Amturnide were added to the policy

Enteral Therapy New York

 MVP Option and MVP Option Family variation was added. In addition to criteria established in the policy, these members would also need to be fed via nasogastric, gastrostomy or jejunostomy tube

Gout

• New policy requiring quantity limits of 60/30 for Colcrys and step therapy or prior authorization for Uloric and Krystexxa

Growth Hormone

 Option and Option Family variation was added. Tev-Tropin and Humatrope are the preferred growth hormones for these products

Mail Service

• Pradaxa was added as excluded from mail order

Proton Pump Inhibitors

• MVP Option and MVP Option Family variation was added. Generic PPIs are preferred for these products

Quantity Limits

• MVP Option and MVP Option Family variation was added. Subutex, Suboxone and generic equivalents are limited to 60 units per 30 days

The following policies were reviewed and approved without any changes to criteria:

- Acromegaly
- Fabry's Disease
- Hereditary Angioedema
- Kuvan
- Leukotriene Modifiers
- RSV
- Samsca
- Smoking Cessation Medications
- Xolair
- Zorbtive

Formulary updates for Commercial members

The MVP formulary is updated after each Pharmacy and Therapeutics Committee meeting. The most current version is available online at **www.mvphealthcare.com**. Simply visit the site's *Provider* section and under *Pharmacy*, click on *Formulary*. The MVP Formulary can be downloaded to a PDA device from **www.epocrates.com**. There is a link to ePocrates[®] on the MVP Web site.

New drugs^{\dagger} (recently approved by the FDA, prior authorization required, Tier 3)

| Drug Name | Indication |
|----------------------------------|---------------------------------|
| Axiron | Testosterone deficiency |
| Benlysta [†] (medical) | Systemic lupus erythematosus |
| Banzel susp | Lennox-Gastaut syndrome |
| Butrans | Moderate-to-severe chronic pain |
| Corifact ⁺ (medical) | Factor XIII deficiency |

Medication recalls and withdrawals

In the past several weeks, the Food and Drug Administration (FDA) has issued important medication warning, withdrawals and recalls. Highlights of the FDA activity include:

- In June, Endo Pharmaceutical announced a nationwide consumer recall of Endocet because some bottles may contain different strengths. MVP has notified 163 members who might have been impacted by this recall.
- In June, Qualitest announced a recall of specific lots of butalbital/APAP/caffeine and hydrocodone/APAP due to the possibility that the bottles may contain incorrect tablets. MVP has notified 61 members who might have been impacted by this recall.

UM Updates

DMEPOS provider auditing program underway

Effective September 1, 2011, MVP Health Care's DME Utilization Management Unit will begin conducting audits of durable medical equipment (DMEPOS) claims.

The purpose of these audits is to:

- substantiate claims for medical necessity, appropriate coverage/applicable benefits and justification of charges;
- · identify adverse utilization trends;
- · identify inappropriate claims submission; and
- assess aberrant billing methods that affect copayments for MVP members.

The DME audits will be conducted for HCPCS codes billed to MVP that are not included on the DME Prior Authorization Code List. Action(s) resulting from the audits may include further investigation, possible claim adjustments, feedback to vendors and provider education.

If you have questions about the auditing program, please contact Dan Flanagan, DME Supervisor, at **518-388-2281**.

Effective January 1: new clinical editing knowledge pack

MVP Health Care will enhance its clinical editing application, McKesson[®] ClaimsXten[™], an industry-recognized software program, with a new **Waste and Abuse Knowledge Pack** on January 1, 2012.

McKesson ClaimsXten ensures that payment policies are applied consistently while providing additional transparency for providers.

The sources of ClaimsXten's correct coding standards include but are not limited to:

- National Correct Coding Initiative (NCCI)
- American Medical Association (AMA)
- Current Procedural Terminology (CPT[®])
- Healthcare Common Procedure Coding System (HCPCS)

These standards are currently used for facility and non-facility claims.

If you have any questions about these changes, please contact your Professional Relations Representative.

Reminder: InterQual criteria use began August 1

InterQual[®] criteria, published by McKesson[®] Health Solutions, are used in many of MVP Health Care's medical review processes to support the medical necessity of health care services. The criteria are updated by McKesson Health Solutions to be consistent with evidence-based standards of care and current practices. Please be aware that MVP began using the 2011 InterQual Criteria on August 1, 2011.

To access 2011 InterQual criteria, log in at

www.mvphealthcare.com/provider

Vitamin D testing recommendations

Are you wondering what to tell your patients who are concerned about their Vitamin D level and ask to have it tested?

A November 2010 report from the Institute of Medicine (IOM) entitled *Dietary Reference Intakes for Calcium and Vitamin D* provides sound information on which to base recommendations. This report summarizes the IOM's study of health outcomes compared to Vitamin D and calcium levels. After assessing more than 1,000 studies, the IOM concluded that information about the health benefits tied to these two nutrients were from studies that provided often mixed and inconclusive results and could not be considered reliable. Only bone health was tied to having sufficient levels of Vitamin D and calcium.

General recommendations based on this report are:

- There is no conclusive evidence supporting routine Vitamin D testing for healthy adults or for children.
- Nearly all Americans obtain sufficient Vitamin D from their diet without supplementation for bone health.
- There are special populations identified as being at risk for Vitamin D deficiency (immigrant populations, those with dark skin, the elderly who are institutionalized or who are obese). Individuals in these groups may benefit from Vitamin D testing and supplementation.

The Local Coverage Determination for Vitamin D Assay Testing (L29510) indicates that, for Medicare beneficiaries:

- The level of 25-hydroxyvitamin D may be measured. Measurement of other metabolites is generally not medically necessary.
- Vitamin D testing may not be used for routine screening.
- Once a beneficiary is shown to be vitamin D deficient, further testing is medically necessary only to ensure adequate replacement has been accomplished. Thereafter, annual testing may be appropriate depending upon the indication and other mitigating factors.

Quality Updates

Clinical guidelines re-approved

MVP's Quality Improvement Committee (QIC) recently re-approved the following existing clinical guidelines:

MVP Health Care, as part of its continuing Quality Improvement Program, has adopted Adult Preventive Care Guidelines. These adult prevention guidelines reflect the most current recommendations of the United States Preventive Services Task Force (USPSTF). For adult immunizations, MVP continues to endorse the current recommendations of the Advisory Committee on Immunization Practices (ACIP) of the Centers for Disease Control and Prevention (CDC).

Smoking Cessation:

MVP continues to endorse the Health and Human Services (HHS) smoking cessation guideline. The HHS recommendations include tips for assessing a patient's readiness to quit and suggested medications for patients who want to stop smoking. Additionally, there is a tear sheet containing tips for patients to improve their chances of quitting successfully.

Adult Low Back Pain:

MVP's low back pain guideline is from the Institute of Clinical Systems Improvement (ICSI). ICSI is an independent non-profit organization that provides health care quality improvement to medical organizations. A copy of the guideline is available online from ICSI at: www.icsi.org/guidelines_and_more/guidelines_ order_sets_protocols/musculo-skeletal/low_back_pain/ low_back_pain_adult_5.html. There is an executive summary included along with an easy to follow algorithm. The guideline is 74 pages long, although the first 24 pages are most relevant to MVP's membership. The remaining pages offer annotations that support the specific recommendations of the algorithm.

Paper copies of these recommendations are available by calling MVP's Quality Improvement (QI) department at **1-800-777-4793, ext 2602.** The current edition of the manual online at **www.mvphealthcare.com/provider/qim/index.html.** Offices interested in receiving a paper copy of the updated guidelines should call the QI Department at the number above.

Provider Directory Updates

If you have any demographic changes to your practice such as practice address, phone number, tax identification, billing address, office hours or NPI number, please contact MVP immediately at **1-800-380-3530, option 4.** Alternatively, you can fax your changes to MVP at **802-264-6509**. We want to ensure that our provider listings on the Web site and in our print directory are as current as possible. A provider directory listing change form is posted online at **www.mvphealthcare.com/provider/documents/ ProviderDirectoryListingChangeForm.pdf.**

Caring for Your Older Adult Patients

CMS Star measures point the way to a 5-star member experience

MVP Health Care now has over 101,000 Medicare members. It is extremely important that we offer benefits to our members that help them "take on life and live well." This includes ensuring that the care received by our members, your patients, continues at a high level of quality, even as the health care system continues to change.

Continue to emphasize preventive care

We are very fortunate in our service area to have so many good physicians who care for older adult patients. There are many physicians who have already begun transforming their practices into Patient Centered Medical Homes, implementing strategies to draw patients into their offices for preventive care services.

An annual visit is a covered benefit for our Medicare members at no cost to them. This exam will give you the opportunity to assess your patient, to keep them healthy and to identify any problems that may be starting to develop. It is an opportune time to talk about and put in place a plan of care (with input from your patient and his or her representative, when necessary) that identifies the services they should receive throughout the year. As noted in the "Clinical Guidelines Re-Approved" article in this issue, MVP's Adult Preventive Care guidelines contain key USPSTF recommendations in an easy-to-follow table format. There is a special section for people ages 65 and older that includes additional tips, as the recommendations are tailored to this age group. You will see that many of these tips relate to the Stars measures shown below.

CMS Star program raises the bar

Articles in the last two issues of *Healthy Practices* have introduced the Star program and the expectations that the

Centers for Medicare and Medicaid Services (CMS) has of MVP and the physicians who contract with MVP to care for our Medicare members. CMS is now rating the MVP Preferred Gold HMO and GoldAnywhere PPO products based on clinical outcome measures, member satisfaction (access and service) and administrative oversight. Currently, the list includes 53 measures.

For many of these clinical measures, MVP and our physicians are rated at a 5-star level across our contracts. This is the highest CMS rating (star ratings are 1 – 5). Our current ratings, though, also point out opportunities for improvement in a number of clinical measures, which are listed here.

In the coming months, MVP will be working with physicians and members to improve these results. Please think about ways to improve these results within your own practice. If you are interested in getting further information about these clinical measures or if you have suggestions as to how we might improve, please contact Mary Orr, Associate Director, Medical Quality Management, Government Programs, at **1-585-327-2284** or **morr@mvphealthcare.com**.

| CLINICAL MEASURE (SOURCE) | DESCRIPTION |
|---|---|
| Annual Flu Vaccine (Member survey data) | Percent of plan members aged 65+ who got a vaccine (flu shot) prior to flu season. |
| Breast Cancer Screening (Claims data) | Percent of female plan members aged 40-69 who had a mammogram during the past 2 years. |
| Cardiovascular Care – Cholesterol Screening (Claims data) | Percent of plan members with heart disease who have had a test for "bad" (LDL) cholesterol within the past year. |
| Controlling High Blood Pressure (Medical record review data) | Percent of plan members with high blood pressure who got treatment and were able to maintain a healthy pressure. |
| Diabetes Care – Kidney Disease Monitoring (Claims & medical record review data) | Percent of diabetic MA enrollees who either had a urine micro-albumin test during the measurement year, or who had received medical attention for nephropathy during the measurement year. |
| Drug Plan – members 65 and older receive a prescription for certain drugs with a high risk of side effects (CMS & pharmacy claims data) | Percent of Medicare Part D beneficiaries 65 years or older who received at least one prescription for a drug with a high risk of serious side effects in the elderly. |
| Improving Bladder Control (Member survey data) | Percent of members with a urine leakage problem who discussed the problem with their doctor and got treatment for it within 6 months. |
| Improving or Maintaining Mental Health (Member survey data) | Percent of all plan members whose mental health was the same or better than expected after two years. |
| Improving or Maintaining Physical Health (Member survey data) | Percent of all plan members whose physical health was the same or better than expected after two years. |
| Monitoring Physical Activity (Member survey data) | Percent of senior plan members who discussed exercise with their doctor and were advised to start, increase or maintain their physical activity during the year. |
| Osteoporosis Management (Claims data) | Percent of female plan members who broke a bone and got screening or treatment for osteoporosis within 6 months. |
| Reducing the Risk of Falling (Member survey data) | Percent of Medicare members 65 years of age or older who had a fall or had problems with balance or walking in the past 12 months, who were seen by a practitioner in the past 12 months and who received fall risk intervention from their current practitioner. |
| Rheumatoid Arthritis Management (Claims data) | Percent of plan members with Rheumatoid Arthritis who got 1 or more prescription(s) for an anti-rheumatic drug. |
| Using the kind of blood pressure medication that is recommended for people with diabetes (CMS & pharmacy claims data) | Percent of Medicare Part D beneficiaries who were dispensed a medication for diabetes and a medication for hypertension who were receiving an angiotensin converting enzyme inhibitor (ACEI) or angiotensin receptor blocker (ARB) medication. |

CMS Star Program: Clinical Measures on which MVP is Focusing for Improvement
